EVANA COLVERT

Network Security Specialist

evana.colvert@gmail.com
(987) 597-1693
Chicago, IL

PROFILE

As a Network Security Specialist with over 3 years of experience, I have an extensive background in IT security, risk management, and network engineering. I have a strong understanding of network access control systems, firewalls, and intrusion detection systems. I have experience in configuring, deploying, and managing networks for compliance with industry standards and regulations. I have expertise in vulnerability scanning, patch management, and security monitoring. Furthermore, I have experience in incident response and disaster recovery processes. I am capable of designing secure networks and identifying potential threats. I am also skilled in developing security policies and procedures. My technical skills and knowledge of cybersecurity are invaluable assets to any organization.

EMPLOYMENT HISTORY

Network Security Specialist at Symantec Corporation, IL
Nov 2022 - Present

- Developed and implemented a complex network security system for Symantec Corporation, IL which reduced the risk of data breach by 30%.
- Configured firewalls to protect confidential information from unauthorized access resulting in an increase of overall cyber-security awareness among employees.
- Implemented sophisticated intrusion detection systems that identified potential threats within the networks with 90% accuracy rate.

Network Security Associate at Check Point Software Technologies, IL
Jul 2020 - Sep 2022

- Developed a new security architecture for the corporate network that achieved 100% compliance with Check Point Software Technologies's standards and regulations, resulting in improved system protection from external threats.
- Designed an automated patch management process which led to 25% reduction of downtime due to unpatched vulnerabilities over 12 months period.
- Implemented advanced logging solutions that helped reduce false positives by 40%, allowing incident response teams more time to focus on actual incidents instead of reviewing irrelevant data entries.
