

Brandalyn Fullick

Chief Technology Officer

Profile

A highly accomplished Chief Technology Officer with a 10-year track record of driving innovation and leading technology teams in the successful execution of complex projects. Proven expertise in strategic planning, system architecture, and process improvement, combined with strong interpersonal skills and a talent for developing high-performing teams. Exhibits an exceptional ability to align technology solutions with business goals, delivering significant improvements in efficiency, productivity, and growth. Skilled in evaluating emerging technologies and identifying opportunities for digital transformation, ensuring organizations remain competitive in rapidly changing markets.

Employment History

Chief Technology Officer at IBM, TX

May 2023 - Present

- Implemented a strategic technology roadmap that increased operational efficiency by 25%: As the Chief Technology Officer at IBM, TX, I successfully developed and executed a comprehensive technology strategy that streamlined processes, integrated innovative solutions, and optimized resource utilization, resulting in a 25% improvement in operational efficiency across the organization.
- Led the migration of critical systems to the cloud, reducing IT costs by 40%: I spearheaded the migration of key applications and infrastructure components to a cloud-based platform, which not only improved system performance and scalability but also significantly reduced overall IT expenditure by 40%.
- Enhanced cybersecurity measures, decreasing security incidents by 60%: Under my leadership, the company implemented advanced security protocols, conducted regular staff training, and employed cutting-edge threat detection and prevention tools. This comprehensive approach to cybersecurity led to a substantial 60% decrease in security incidents, ensuring the protection of sensitive data and maintaining customer trust.

Vice President of Technology at Dell Technologies, TX

Aug 2021 - Mar 2023

- Led the successful integration of Dell and EMC's technology infrastructure post-merger, resulting in a 25% reduction in IT costs and a streamlined system for over 150,000 employees worldwide.
- Developed and implemented a company-wide cybersecurity strategy that decreased security breaches by 40% and increased overall system protection, ensuring the safety of sensitive customer and company data.
- Spearheaded the adoption of cloud computing and virtualization technologies across all departments, reducing data center costs by 30% and improving scalability, efficiency, and flexibility of IT operations.
- Implemented a new Agile software development methodology, leading to a 35% increase in project completion rates and a reduction in software development time by 20%.
