Boston, MA

Profile

As an experienced Software Configuration Manager with over three years of experience, I have developed an in-depth understanding of software development, configuration, and management. My expertise lies in project management, release management, version control management, and software build automation. I have managed complex software systems and software development projects. I have also created and maintained software configuration management plans, and implemented automated build and release processes. I have a strong background in applying the latest technologies and methodologies to software configuration management processes. My experience allows me to quickly and effectively identify, isolate, and resolve software configuration issues in a timely manner.

Employment History

Senior Software Configuration Manager at Ansible, MA

Sep 2022 - Present

- Spearheaded the successful launch of Ansible's flagship product, increasing customer satisfaction by 20% and reducing support tickets by 25%.
- Led a cross-functional team to develop an automated configuration management system that reduced deployment time from 3 days to 2 hours.
- Developed innovative processes for tracking software configurations across multiple environments which increased accuracy rate up to 95%.

Software Configuration Manager at Chef, MA

Aug 2020 - Jul 2022

- Developed and implemented a software configuration management process for Chef, MA that improved code development accuracy by 20% in the first year.
- Led 15 successful major version releases of key enterprise applications on schedule with zero errors or bugs reported in production environments.
- Automated 50+ manual processes associated with software builds, resulting in an average time savings of 2 hours per build cycle.
