Chicago, IL

I am a Software Product Manager with over 3 years of experience in managing software development projects. I have successfully implemented agile methodologies and coordinated with stakeholders to determine product requirements and develop successful product roadmaps. My experience also includes launching products, driving product marketing campaigns, and managing product performance. I have a proven ability to develop and drive product strategies, collaborate with cross-functional teams, and ensure product delivery to customers. I am passionate about developing new products and working closely with stakeholders to ensure successful product launches.

Employment History

Senior Software Product Manager at Oracle Corporation, IL

Nov 2022 - Present

- Developed a new software product for Oracle Corporation that generated \$250M in revenue within the first year of launch. Utilized my expertise in product lifecycle management and market analysis to identify customer needs and develop a comprehensive strategy for the product launch.
- Led the implementation of a new database management system that increased operational efficiency by 25%, resulting in a savings of \$3M in operational costs. Utilized my technical background and project management skills to ensure that the system was implemented properly and on-time.
- Spearheaded the development of a new customer service platform that streamlined support inquiries and reduced response time by 40%. Leveraged my knowledge of customer service processes and my ability to collaborate with different teams to successfully develop the platform.

Software Product Manager at Salesforce.com, IL

Aug 2020 - Sep 2022

- Spearheaded the successful launch of Salesforce's new AppExchange product, resulting in a 20% increase in customer engagement and a 15% reduction in time to market.
 - Developed and implemented an innovative customer feedback program that increased customer satisfaction by 30%, resulting in a 10% increase in customer retention.
 - Created and implemented a new software development process which reduced development time by 40% while still maintaining high quality standards.
-
