PROFILE

Dedicated Public Health Analyst with 2 years of experience in conducting data-driven research and implementing evidence-based strategies to improve public health outcomes. Proficient in statistical analysis, program evaluation, and health policy development. Adept at collaborating with multidisciplinary teams and communicating complex information to diverse stakeholders. Passionate about promoting health equity and addressing social determinants of health.

EMPLOYMENT HISTORY

Public Health Analyst at Montana Department of Public Health and Human Services, MT

May 2023 - Present

- Led a comprehensive analysis of Montana's public health data, resulting in the identification of critical health trends and disparities affecting over 1 million residents. This analysis informed the development of targeted prevention and intervention strategies, contributing to a 15% reduction in chronic disease rates within three years.
- Spearheaded the implementation of a statewide electronic health record system, streamlining the exchange of information among healthcare providers and improving care coordination for over 500,000 patients. This initiative led to a 20% increase in immunization rates and a 10% decrease in hospital readmissions within the first year of implementation.
- Developed and executed a successful public health campaign focused on reducing tobacco use among Montana's youth population. Through strategic partnerships, targeted messaging, and evidence-based interventions, the campaign contributed to a 25% decrease in youth smoking rates over a two-year period, preventing an estimated 2,000 new cases of tobacco-related illnesses.

Associate Public Health Analyst at RiverStone Health, MT

Sep 2021 - Apr 2023

- Successfully conducted a community health assessment for Yellowstone County, leading to the identification of over 50 key health issues and prioritization of 10 major public health concerns, which informed the development of targeted interventions and resource allocation.
- Coordinated and implemented a comprehensive immunization program that increased vaccination rates by 25% among children aged 0-6 years in RiverStone Health's service area, contributing to a significant decrease in vaccine-preventable diseases and promoting overall community health.
- Developed and delivered culturally appropriate health education campaigns to diverse populations within Yellowstone County, resulting in a 30% increase in participation in preventive health services and a 15% improvement in self-reported health behaviors among targeted communities.
